Power BI Dashboard Overview

Why Pop-Up Events Need Data-Driven Decisions?

Problem Statement

Luxury beauty brands invest significantly in pop-up events without standardized KPI benchmarks — leading to suboptimal budget allocation and missed revenue opportunities across markets.

Q1

Profitability

Which event type & location delivers highest revenue per day?

Q2

Sell-Through

What factors drive sell-through rate above 85%?

Q3

Market Expansion

Which regions show untapped demand signals?

Q4

Duration

What is the optimal event duration?

Q5

Footfall Conversion

Does high traffic always mean high conversion?

Dataset at a Glance

Kaggle — Luxury Beauty & Cosmetics Pop-Up Events KPI 2025 • February 2024 – August 2025

	total_rows bigint	brands bigint	cities bigint	regions bigint

Analytical Approach

1. Data Cleaning

Null handling, encoding correction, and data validation.

2. KPI Engineering

Revenue, Revenue/Day, CVR, Sell-Through.

3. Performance Segmentation

Good, Needs Review, Below Average, Critical.

4. Comparative Analysis

Region, brand, location, event type, duration.

5. Business Recommendations

Prioritized actions based on business impact.

Revenue by Region & Event Type

💡 Revenue gap between regions is narrow (\$16M spread). Regional revenue is relatively balanced, **suggesting that event configuration may be a stronger differentiator than geography alone.**

Brand Efficiency & Location Conversion

Top 10 Brand by Revenue/Day (USD M)

Location Type (Daily Footfall vs CVR)

✓ Revenue per day (not total revenue) is the fair efficiency metric — **it controls for event duration.**

✓ High-Street leads in total revenue (\$84M) via volume, while **Art/Design District converts 2.2× more efficiently** — choose location based on goal: **volume vs efficiency.**

Sell-Through Rate & Optimal Duration

☆ Middle East: highest sell-through (72.62%) yet ranks 3rd in revenue — strong demand signal with untapped inventory potential.

☆ Flash Events outperform other duration segments, suggesting that shorter activations may benefit from stronger urgency and customer engagement.

Event Performance Distribution

Based on sell-through rate thresholds across 2,133 events

Good events generate 63.3% of total revenue (\$239.5M of \$378.11M). The 450 **Below Average** events represent the **highest-impact improvement opportunity**, Improving sell-through toward 70% could increase revenue capture, subject to available inventory and demand conditions..

4 Strategic Findings

Observation → So What?

1. *Untapped Potential.*

Middle East: highest sell-through (72.62%) but ranks 3rd in total revenue at \$74.41M.

Strong product-market fit but underpenetrated volume. Strong sell-through **suggests unmet demand** and room for higher event scale or inventory allocation.

3. *Performance Gap.*

450 Below Average events average only 53% sell-through — 42.7% of all events need improvement.

This is the highest-impact fix: **improving 450 events from 53% to 70%+** unlocks significant untapped revenue.

2. *Quality Traffic.*

Art/Design District has the highest CVR (9.10%) despite the lowest footfall while High-Street has the highest footfall (1,880/day) but the lowest CVR (4.16%).

High traffic does not equal high conversion in luxury retail. Location type determines purchase intent — **niche locations attract buyers, mass locations attract browsers.**

4. *Strategic Fit.*

Brand performance rankings shift dramatically per event type, no universal top performer exists.

Each brand has a home format where they excel. Running the wrong brand in the wrong format wastes budget.

Recommendations

What Should We Do?

Untapped Potential.

Increase SKU depth & event frequency in Dubai/Riyadh before Q3. Test 15-20% more inventory on Flash Events first.

Performance Gap.

Choose location based on objective: High-Street for revenue volume (\$84M total), Art/Design District for conversion efficiency. Never evaluate location by footfall alone

1

2

3

4

Quality Traffic.

Audit Below Average events by brand-location-format pattern. Replicate Good performer configurations to close the gap. Prioritize the highest-revenue Below Average configurations first.

Strategic Fit.

Match brand to event type based on historical performance data. NARS excels in Flash Events; Estée Lauder in Mall Kiosks.
